

Capstone Project - The Battle of Neighborhoods

1. Introduction

1.1 Background

India is a fast-growing country with its population majority migrating towards the Metro cities of the nation. These cities provide lot of economical growth opportunities. Due the opportunities they offer, these cities have already exhausted their resources and have no place to accommodate more migrants from different parts of the country.

To solve this problem, suburbs were constructed so that these metro cities can continue accommodating migrants from different part of the country. As people come into these metro areas, it becomes very difficult to choose a place of one's liking and once settled it becomes very difficult to move out of that area due to the costs involved in moving

2.2 Problem

Delhi is the capital of India and witnesses one of the highest immigrants from different parts of the country. Due to the number of immigrants, Delhi had exhausted its infrastructure in the 1990's itself. To solve this problem, two main suburbs were established i.e. Noida and Gurugram.

These two suburbs have grown over time and have unique experiences to offer. When a person moves to Delhi, they generally tend to settle in one of these suburbs. As people come from different backgrounds, it becomes very difficult to choose which suburb to live and in which area to live

This project aims at solving this problem by analyzing both the suburbs and it's areas. It also tries to find how similar both suburbs are.
